

Ordering and Comparing Fractions

Which fraction has the greater numerator (top number)?

$$\frac{1}{4} \quad \frac{3}{4}$$

Which fraction has the is greater?

Explain your thinking: _____

Circle the greater fraction in each pair:

$$\frac{3}{14} \quad \frac{6}{14}$$

$$\frac{4}{12} \quad \frac{7}{12}$$

$$\frac{47}{125} \quad \frac{46}{125}$$

$$\frac{13}{98} \quad \frac{20}{98}$$

Put these fractions in order from least (smallest) to greatest (biggest):

$$\frac{2}{3} \quad \frac{1}{3} \quad \frac{3}{3}$$

$$\frac{2}{10} \quad \frac{1}{10} \quad \frac{9}{10} \quad \frac{7}{10}$$

$$\frac{7}{12} \quad \frac{4}{12} \quad \frac{12}{12} \quad \frac{11}{12}$$

Two fractions have the same denominator (bottom) but different numerators (top). How can you tell which fraction is bigger? Explain your answer:
