

Step 2:

There are 2 tens blocks in each group.

There are 4 groups.

So $2 \times 4 = 8$ tens blocks have been placed.

In the model:

$2 \times 4 = 8$

4. For each question, find how many tens can be placed by multiplying?

a)
$$\begin{array}{r} \square \\ 3 \overline{) 87} \\ \square \end{array}$$

How many groups? _____

How many tens? _____

How many tens in each group? _____

How many tens placed altogether? _____

b)
$$\begin{array}{r} \square \\ 4 \overline{) 96} \\ \square \end{array}$$

How many groups? _____

How many tens? _____

How many tens in each group? _____

How many tens placed altogether? _____

5. Use skip counting to find out how many tens can be placed in each group. Then use multiplication to find out how many tens have been placed.
